

YOUR PARTNER FOR HEALTH

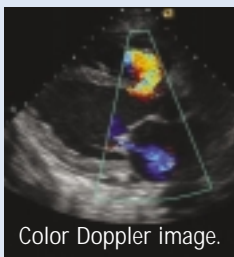

ECHO

Echocardiology

EARLY DETECTION SAVES LIVES

Echocardiology, a tool for early detection of heart disease, uses ultrasound technology (echoes) to see and measure blood flow in the coronary arteries. Now NDIC offers the very latest technology in Echocardiology to produce cleaner, crisper images, particularly among people who have the highest risk of heart disease.

With NDIC's new system, even difficult-to-image people – those who are obese or have an artificial heart valve or excessive scarring – can often be examined without costly and uncomfortable diagnostic procedures.

Color Doppler image.

Make NDIC your partner in health for the latest technology, the best medical staff and the most responsive service.
